

5) Risk versus Benefit?

Given evolving scientific findings, it is very clear that further COVID-19 "vaccines" and "boosters" pose far greater RISKS than BENEFITS. (8)

Currently, the survival rate after a COVID infection is nearly 100% (except for those with 2, 3, 4 or more doses, but additional doses make the problem WORSE.) The MORE times people take the vaccine, the MORE severe their COVID symptoms become as the body's immune system is weakened from fighting off repeated waves of spike protein manufactured as a result of the injections.

Antibodies produced through vaccination wear off in a few months. Blood based antibody studies demonstrate that over 90% of Canadians show long lasting immunity due to prior infection. (9) Yet **taking additional doses AFTER recovery essentially undoes the benefit** of naturally acquired immunity.

Last year's "bivalent" vaccines contained double sets of instructions which led to the production of twice as much toxic spike protein. They were NOT tested on humans. (ONLY on 8 mice, all of whom caught COVID afterwards.) This year, new fall boosters continue working on a mRNA platform which has been documented to have many more risk factors than natural therapeutics that help rid the body of the virus. It is now known that Health Canada altered the vaccine approval process to remove the criteria of "safety & efficacy" from the process. (10) NO mRNA-based vaccine can be trusted to be truly safe and effective.

6) Long Covid versus Vaccine Injury?

Most of the damage from COVID-19 and COVID-vaccines is linked to one component of the SARS-CoV-2 virus: spike protein. The protocols that effectively treat and prevent this damage exist, yet physicians are officially prevented from using key components.

Sadly, we are being nudged by government-sponsored behavioral influencing in ways that benefit certain big players in the pharmaceutical industry. (11) The flow of scientific information and how it is presented is being tightly controlled.

Canadians interested in unfiltered information about the diagnosis, reporting and treatment of spike protein-induced injury/disabilities (including Long Covid) can visit these sites:

- <https://www.caers.info/adverse-events-reference-guide>
- <https://www.canadiancovidcarealliance.org/vaccine-adverse-event-tracking/>
- <https://www.canadiancovidcarealliance.org/treatment-protocols/>

- <https://www.canadiancovidcarealliance.org/media-resources/post-covid-vaccine-events/>

Information on preventative and therapeutic measures can also be found on the website of the Canadian Covid Care Alliance and through the World Council for Health. Topics include D-Dimer test, nutraceuticals, saline rinses and more.

This documentary provides a strong overview of many issues surrounding COVID-19 in Canada. <https://rumble.com/v1erlp3-uniformed-consent-matador-films-full-documentary.html> (11) <https://www.canadiancovidcarealliance.org/wp-content/uploads/2022/09/Real-Time-Ethics-Discerning-Truth-2022-09-20.pdf>

CONFUSED about COVID moving forward?

Whether you are

Vaxxed
Unvaxxed
Boosted
Not yet Boosted
Skeptical
Convinced
Critical
Confused

Maybe we can help clarify....

Masks versus Breathing Barriers?

Viral Transmission versus Prevention/Protection?

Natural versus Vaccine Acquired Immunity?

Long Covid versus Vaccine Injury?

Risk versus Benefit?
